## PARTS PREDICTION COEFFICIENTS

Number of pins and parts occupancy area are estimated based on key parts arrangement. Accordingly, further calculations based on these values may yield results different from those obtained experimental data.

In the present calculation, therefore, prediction coefficients are used as shown below in the table, which are provided to estimate these values more precisely to realize actual mounting on the PWB by taking into account of predicted number of the parts expected to be mounted.

	RATIO OF PIN NUMBER TO TOTAL KEY PARTS PIN NUMBER	AREA PER PIN	PREDICTED PIN NUMBER	PREDICTED AREA (cm <sup>2</sup> )
RESISTOR	1.7	0.8	639	5.11
CAPACITOR	5.2	3.7	209	7.73
OTHER	23.6	7.7	46	3.54

FIG. 19A

A dialog box titled "INPUT RESOURCE PART NO." with a close button (X) in the top right corner. Inside the dialog, there is a label "PWB PART NUMBER" followed by a text input field containing "E0005678 |". Below the input field, there are two buttons: "OK" and "CANCEL". A reference numeral "43" is positioned to the left of the "OK" button, with a line pointing to it.

FIG. 19B

A rectangular box containing three stacked rectangular buttons. The top button is labeled "APPROXIMATE PWB COSTS", the middle button is labeled "COMMENTS ON PREDICTION COEFFICIENTS", and the bottom button is labeled "RESOURCE DISPLAY". A reference numeral "30" is positioned to the left of the bottom button, with a line pointing to it.

FIG. 19C

A rectangular box containing three stacked rectangular buttons. The top button is labeled "APPROXIMATE PWB COSTS", the middle button is labeled "COMMENTS ON PREDICTION COEFFICIENTS", and the bottom button is labeled "RETURN". A reference numeral "44" is positioned to the left of the bottom button, with a line pointing to it.
